

TUSCO

PERIMETER SECURITY SOLUTIONS

BEAM BARRIERS

a PERFORMANCE DRIVEN company

Beam Barriers

Beam barriers provide high security in tight areas where traditional gates may not have adequate room to function. They are also used in areas where pedestrians are allowed to move freely, but with limited vehicular access. Beam barriers are highly versatile, available in swing, slide, and vertical lift models. Each system has an option for hydraulic, electric, or manual operation.

Tusco is certified in the installation, service, operation, and maintenance of these products.
