

VISION ZERO TALLADEGA

SAFETY ACTION PLAN
AUGUST 2025

DEDICATION

**“ONE LIFE LOST ON
TALLADEGA ROADS, IS
ONE TOO MANY.”**

The Vision Zero initiative is a commitment by the city to act to create a safer environment for the residents. Throughout the engagement process we collected the signatures of those in the city committed to the vision.

ACKNOWLEDGMENTS

Thank you to city staff, the community task force, and all residents that were involved in the planning process, who contributed to this plan, to create a safer Talladega.

INTRODUCTION

Vision Zero is a strategy to eliminate all traffic fatalities and severe injuries, while increasing safe, healthy, equitable mobility for all.

Vision Zero is a strategy to eliminate all traffic fatalities and severe injuries, while increasing safe, healthy, equitable mobility for all. First implemented in Sweden in the 1990s, Vision Zero has proved successful across Europe – and now it’s gaining momentum in major American cities.

Each year, more than 42,000 people – the population of a small city – are needlessly killed on American streets and thousands more are injured. We call this suffering traffic “accidents” – but, in reality, we have the power to prevent traffic collisions.

For too long, we’ve considered traffic deaths and severe injuries to be inevitable side effects of modern life. While often referred to as “accidents,” the reality is that we can prevent these tragedies by taking a proactive, preventative approach that prioritizes traffic safety as a public health issue.

The significant loss of life exacts a tragic toll, extending beyond personal loss to deep community impacts, including: personal economic costs and emotional trauma to those suffering; and significant taxpayer spending on emergency response and long-term healthcare costs. And because so many fear for their safety on our streets, there is no true freedom of mobility, and, as a result, we compromise our public health with increasing rates of sedentary diseases and higher carbon emissions.

VISION ZERO COMMITMENTS

The following commitments are fundamental to the Vision Zero approach. They are a departure from the traditional views of traffic safety, and emphasize new methods of approaching safety. Talladega acknowledges the need to change by committing to the following elements.

A SYSTEMS APPROACH

A Safe System approach involves anticipating human mistakes by designing and managing road infrastructure to keep the risk of human mistake low. If residents of Talladega do make mistakes that lead to a crash, the impacts on the person(s) involved is not such that results in a fatality or serious injury.

Streets

Safe
Speeds

DATA DRIVEN

Vision Zero is a data-driven approach to road network safety. Talladega will be responsible for gathering, analyzing, utilizing, and sharing both formal data on injury crashes and community input to understand traffic safety priorities. The technical data, and the voice of the community will be used to target areas of the city with the highest risk for road users.

AREAS OF PERSISTENT POVERTY

Equity is not only a desired outcome of Vision Zero, it is integral to every component planning and implementation. Equitable strategies, such as prioritizing safety improvements in the areas of Talladega that have historically been underserved, and building robust engagement strategies to reach the most vulnerable roadway users who have not typically been included in traditional planning processes are priorities for Vision Zero.

63% of population lives in disadvantaged census tracts

GOALS

The goals from the Action Plan should reflect the data that was collected, and should focus on high impact areas of the City, but should also reflect an equity lens. Measurable goals with a clear timeline for implementation is the standard when identifying projects.

ACCOUNTABILITY

Shared responsibility among all the stakeholders in Talladega is vital for the success of the Vision Zero plan. This requires a high level of communication and collaboration between groups to see positive outcomes, through projects that have been implemented, and evaluated.

PLAN VISION

This vision statement is the aspirational goal that serves as the foundation of the city's safety action plan. Because human life should be focus of our planning efforts, only the highest goal is worth the investment from the community to create a safer environment.

ZERO DEATHS AND SERIOUS INJURIES BY THE YEAR 2030

ON AVERAGE THERE IS...

1 CRASH
EVERY **28** HRS

GUIDING PRINCIPLES

The guiding principles serve as the framework established by the city and community task forces to shape the Safety Action Plan. The plan's structure and recommendations will align with these principles to help direct the city's efforts. These principles will also play a key role in reshaping public perceptions of traffic safety.

CULTURE CHANGE

Foster a community mindset that views traffic deaths and severe injuries as preventable and safety as a shared value.

WELL-BEING

Ensure transportation systems promote health and well-being for all communities, prioritizing areas of persistent poverty.

SAFETY

Design streets and implement measures that prioritize safety by encouraging slower, more cautious vehicle speeds.

DATA-DRIVEN

Base decisions and actions on reliable data to identify issues, prioritize solutions, and evaluate progress.

ACCOUNTABILITY

Build trust through transparency and open communication, measurable outcomes, and shared responsibility for results.

2

TRAFFIC SAFETY IN TALLADEGA

The background of the entire page is a grayscale photograph of a street scene. On the left, there is a multi-story brick building with arched windows. In the center and right, a parade float is visible. The float has a sign that reads "THIS FRI SAT 7 PM GROUNDHOG DAY MARDI GRAS PARADE 2-23". There are several cars parked or moving along the street in front of the building.

COMMON CRASH FACTORS

RED LIGHT RUNNING

Red light running can be caused by many factors, from lack of attention to distracted driving. While driver behavior is an issue that can be addressed through education efforts, there are also technical approaches that can reduce red light running.

Ensuring that signals are highly visible, and that the size and brightness of the signals are sufficient are two ways help driver recognition.

UNSAFE TURNS

Left-turn crashes, right turn slip lanes, turning right on red are all common network actions that can be unsafe on a road network. Most commonly a failure to correctly yield causes the most crashes. Each of these actions can be altered to create a safer environment for vehicles, pedestrians and cyclists.

Right turn slip lanes are hazardous for vehicles and pedestrians when correct usage and signage are not properly executed.

STREET DESIGN

Poor street design is one of the leading causes of traffic related incidents. The primary reason is that roadway users adapt their behavior based on design. Mode roads are designed to accommodate maximums, allowing drivers to feel more comfortable driving at high speeds. Likewise, lack of pedestrian infrastructure encourages reckless behavior.

SPEEDING

Speeding is one of the leading causes in traffic fatalities. A minimal reduction in the travel speed of a vehicle greatly reduces the chance that the crash results in a fatality. While Vision Zero emphasizes that speed is not the only factor that needs to be addressed, it does significantly improve the outlook of crashes.

IMPAIRED DRIVING

Impaired driving is always dangerous and highly increases the risk of serious injuries and fatalities. Alcohol and drug related crashes account for high percentages of crashes. Impaired driving is also one of the top public fears when driving, walking, or biking on roadways in the city.

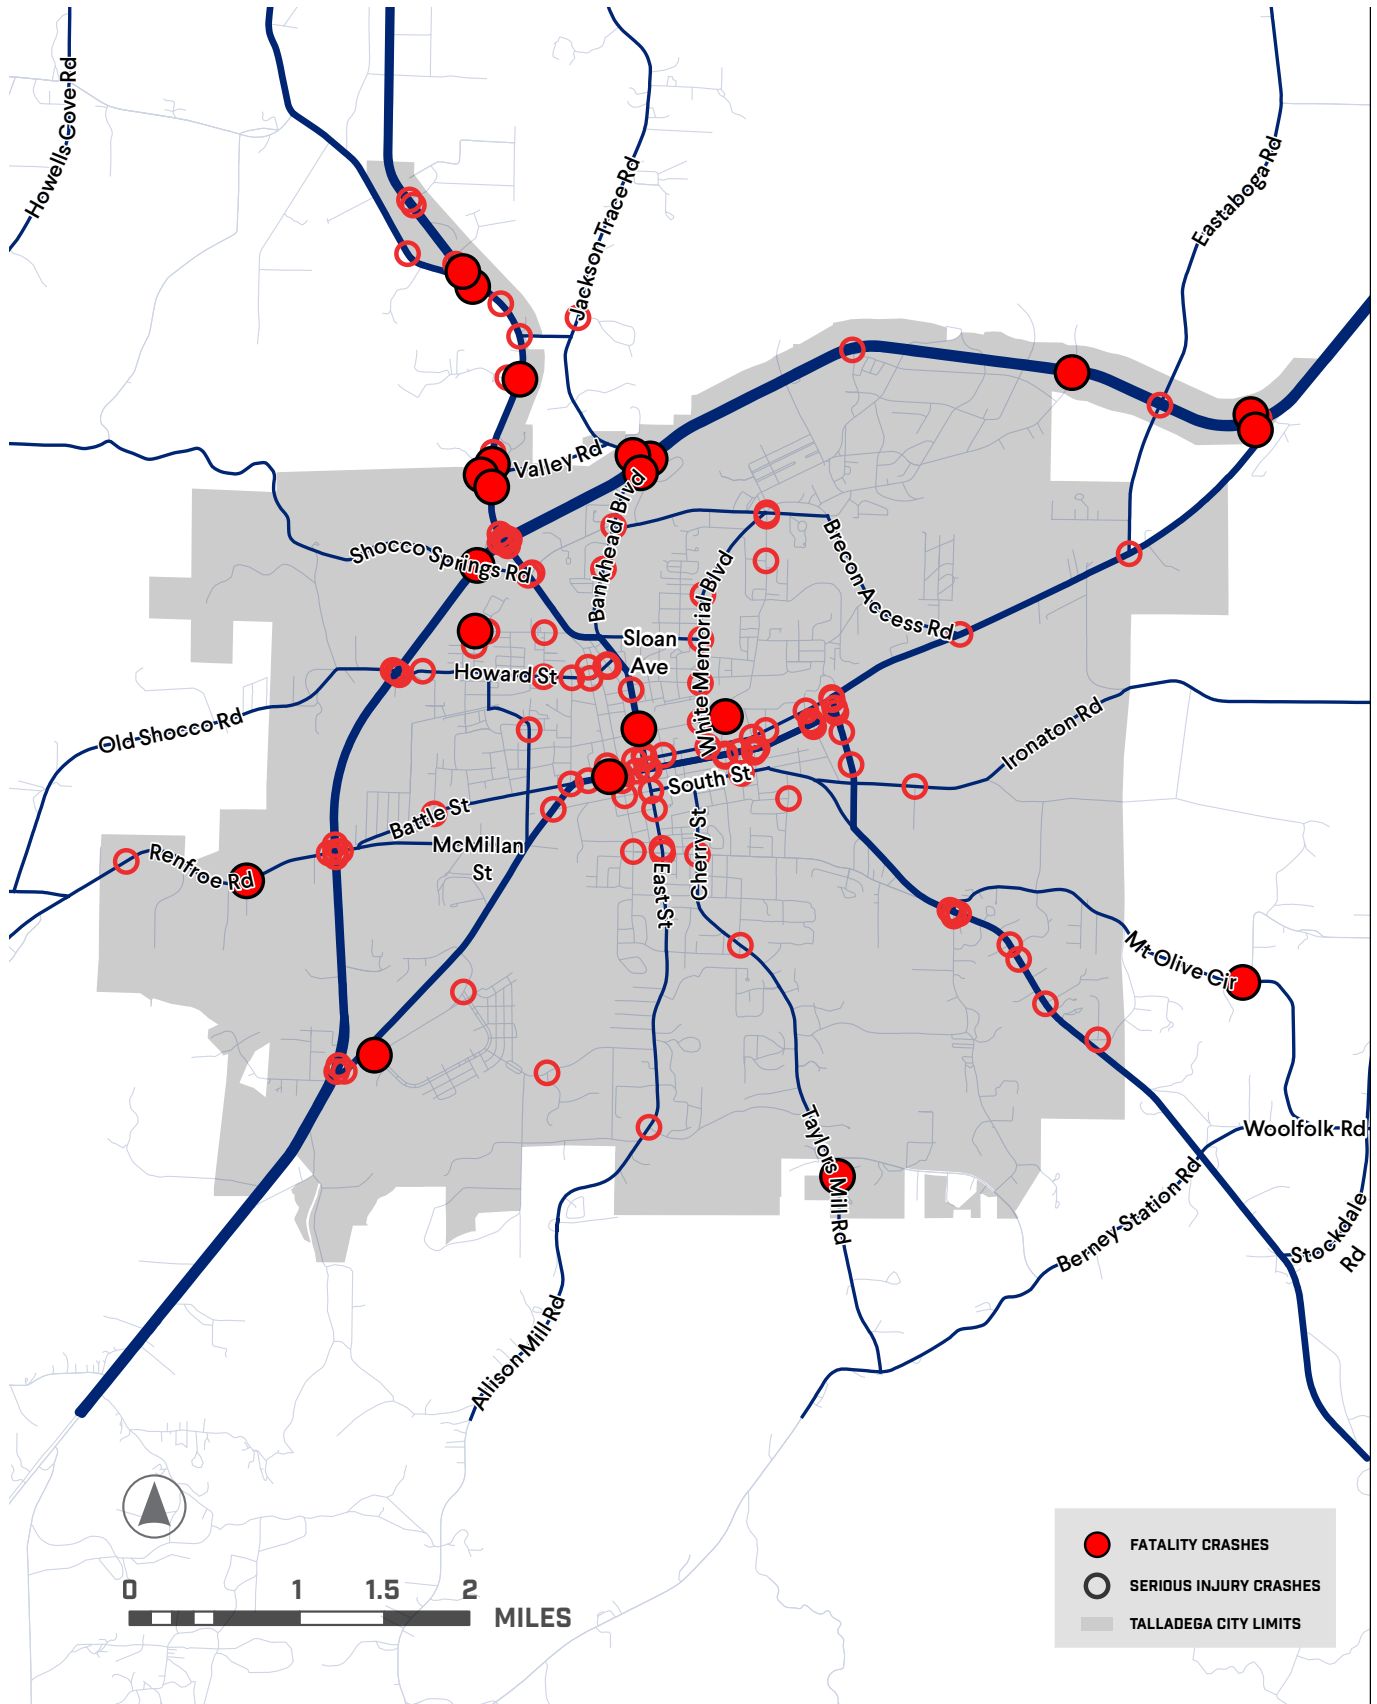

DISTRACTED DRIVING

Distracted driving has become more of a problem as mobile phones have become such a prominent tool for road users. While there are other distractions that drivers can face, phone usage while driving severely impairs attention and driver reaction times. This was also one of the primary concerns from the public during the engagement process.

HEATMAP

The heatmap compiles all of the most recent crash data and maps the intensity of occurrences. The yellow areas show where the highest number of incidents occurred. This data reveals the most problematic roads and intersections in the city and provides insight into where the city should prioritize implementation.

EXISTING PLANS REVIEW

Existing and current policy and plans for the City of Talladega were reviewed with the goal of identifying whether they support the goals of the Vision Zero Safety Plan.

After reviewing the City's primary regulatory documents, the ordinance and Subdivision regulations, it has been determined that they fail to adequately address roadway and pedestrian safety.

The City recently completed an update to its Comprehensive Plan in partnership with the East Alabama Regional Planning Commission. After reviewing the document, there are significant goals and action items that support the goals of the Safety Action Plan. The Transportation Section of the plan identifies the following:

Goal 1: Promote and Enhance Alternative Forms of Transportation, such as Walking or Biking

- Objective 1: Retrofit streets and sidewalks to encourage walkability, adding pedestrian amenities such as lighting, streetscape, crosswalks, and on-street parking
- Objective 2: Implement bike lanes and bike racks to facilitate bicycle transportation
- Objective 3: Add and upgrade existing sidewalks to have sufficient width, buffering, continuity, connectivity, and ADA compliance and accessibility

In 2015 an ADA Transition and Sidwalk Master Plan was completed for Talladega. There are several projects addressing ADA compliance that have been completed and/or are on-going.

There are not currently any bike master plans that address the City.

3

COMMUNITY ENGAGEMENT

MEETINGS

The project team, in coordination with city staff, hosted three community meetings. Each meeting was held with a diverse group of stakeholders that make up a significant portion of the population, and that represent a high percentage of targeted users of the road network. An introduction to Vision Zero was given at each meeting, and the most recent feedback and crash data was presented. Attendees were given time to ask questions and participate in exercises to share their feedback.

The three community meetings were with the following groups:

PUBLIC LIBRARY: GENERAL PUBLIC

TALLADEGA COLLEGE: STUDENTS, FACULTY, & STAFF

ALABAMA INSTITUTE FOR DEAF AND BLIND: STUDENTS, FACULTY, & STAFF

Talladega College

Public Meeting

AIDB

KEY THEMES

During the public engagement process there were several themes that surfaced repeatedly that will be used in collaboration with the data information to help determine recommendations in the Action List.

BUILD COMPLETE STREETS

REDUCE SPEEDING

ELIMINATE DISTRACTED DRIVING

Notable quotes and highlights from residents during our meetings:

Most residents do not feel comfortable walking or biking.

ADA upgrades

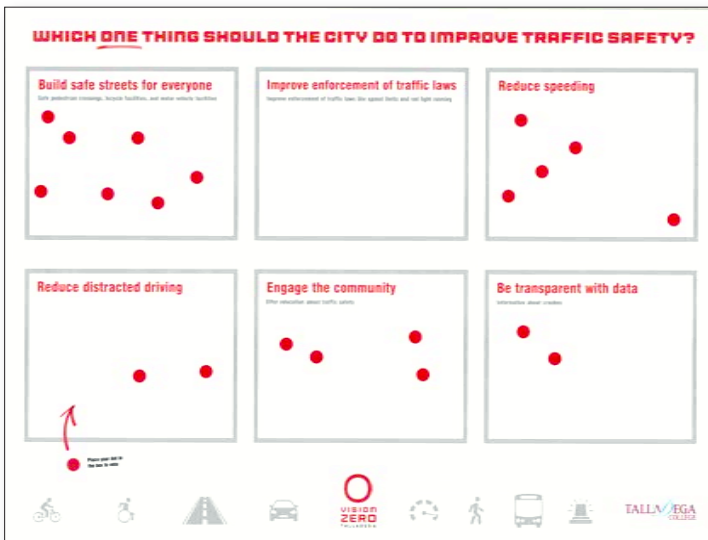

More sidewalks to complete the network was frequently requested.

More crosswalks

Maintenance of sidewalks

Several engagement exercises were conducted during community meetings. There was consensus that road design, speeding, and distracted driving were the top three areas of concern for residents. Each of these areas, paired with the crash data, will reveal where the city needs to focus and what actions will be most appropriate to address the concerns.

- Build Safe Streets
- Reduce Speeding
- Reduce Distracted Driving
- Engage the Community

DRIVER BEHAVIOR

- Speeding
- Distracted Driving
- Improper Pedestrian Crossing

INFRASTRUCTURE

- Poor Roadway Design
- Lack of Pedestrian Infrastructure
- Unsafe Intersections

- Complete Streets
- Education Programs

SAFETY TASK FORCE

The City helped identify and select members for the Task Force that would serve as representatives and contacts throughout the duration of the project. The task force met approximately every other month and was provided updates on the progress of the plan, and was given opportunity to provide feedback. This group would serve as the initial point of contact for the Vision Zero plan, but a recommendation for the City is to select and form a more permanent group that would take over for implementation and monitoring.

Several members of the City were part of the Task Force including the Mayor, City Manager, and Fire Chief. The Police Chief was also used as a reference. The remainder of the group was made up of several representatives from the local schools and college, community representatives, and local business owners.

HIGH INJURY NETWORK

The High Injury Network (HIN) is a map that is created from the extensive crash data provided by the city and highlights the areas where the data reveals the most vulnerable areas for crashes to occur. This network guides the recommendation process for the city.

Once the areas with the highest concentrations of crashes has been identified, Talladega has the best information to enact plans to directly reduce the risk of incidents in the future.

There are currently 6 miles of roads in the city that have been identified as part of the HIN. This makes up 3% of all roads in the city. However, as seen from the previous data, the most frequent number of incidents occurs at intersections along the HIN corridors. There have been 17 interactions identified as high incident intersections. Many of these around found outside of the HIN corridors.

5

ACTION PLAN

FRAMEWORK

The Safety Action Plan is the framework that Talladega will use to achieve a safer transportation network for all users. There are several key themes and metrics that will help the city identify and prioritize how to best implement counter measures to create safer streets.

The framework is based on the systems approach that Vision Zero utilizes to define safe networks. Each system theme is broken down into the following components that the city will use to address the Action Items.

ROAD NETWORK SYSTEMS

Safe Streets

Safe Community

Prioritize Equity

Data Quality

ACTION PLAN FRAMEWORK COMPONENTS

Action Item

The action item is a recommendation for the city on how to improve the safety network. Each action will be accompanied with the following:

Timeline

The length of time it would take to implement.

Priority

How quickly should the city address this item?

Partners

Who should be involved?

Implementation

Notes related to how best to approach the item.

STRATEGIES

SAFE STREETS

Creating safer streets is one of the fundamental ways that the City can improve overall safety of their transportation network. Safe streets consider all forms of mobility and provide equitable recommendations for the community.

ACTION ITEMS	TIMELINE	PRIORITY	PARTNERS	IMPLEMENTATION
Strategy 1: Address improvements on the high injury network				
Prioritize streets in the High Injury Network (HIN) as the most prone areas for crashes.	IMMEDIATE	HIGH	City of Talladega, ALDOT	Quick build methods should be utilized to address as many areas of HIN as possible.
Prioritize intersections in the HIN as the first places to begin implementing safety measures.	IMMEDIATE	HIGH	City of Talladega, ALDOT	Explore quick build solutions that can be tested for more permanent implementation
Strategy 2: Update Speed Limits				
Review and evaluate speeds and the posted limits of all streets included in the High Injury Network (HIN).	SHORT	HIGH	City of Talladega, ALDOT	When evaluating speed reduction, consider future traffic calming strategies.
Consider reducing speeds on major arterials that run through the city.	MEDIUM	HIGH	City of Talladega, ALDOT	Utilize temporary speed reduction measures to test long-term viability
Strategy 3: Improve Street Design				
The City should create design standards for the HIN and intersections that are most problematic.	MEDIUM	MEDIUM	City of Talladega	Establishing a road network design hierarchy will help the city implement updates when regular maintenance occurs.
Adopt a Complete Streets policy and implement in new roadway projects.	IMMEDIATE	HIGH	City Council, Planning Commission	Passing a Complete Streets ordinance will guide equitable road development for all users.

Study eliminating or improving the safety of HIN left turn lanes,	LONG	LOW	City of Talladega, ALDOT	The city could do a traffic study on intersections in the HIN to determine if left turns are the leading issue of crashes.
Strategy 4: Continuing adding bike and pedestrian Infrastructure				
Complete sidewalk networks in high vulnerability areas: on school campuses, and connecting to downtown from key locations	SHORT	MEDIUM	City of Talladega, Talladega College, AIDB	Create a walkability and bike plan for the entire city that shows existing and future bike and pedestrian infrastructure
Add bike lanes on strategic roads to create a safer environment.	MEDIUM	MEDIUM	City of Talladega	Study the safest routes for bike lanes to connect the city.
Strategy 5: Increase frequency of maintenance				
Ensure all modes of transportation, bike, and pedestrian paths are clear of debris	IMMEDIATE	HIGH	City of Talladega	Regularly monitor the sidewalk network and schedule routine maintenance. Create a system that allows residents to report problem areas.
Strategy 6: Assemble a toolkit of implementable countermeasures				
Traffic calming strategies: curb extensions, raised crosswalks, pedestrian islands, greater crosswalk visibility with material or pavement marking	SHORT	MEDIUM	City of Talladega	Consult toolkit, Identify high impact locations from the HIN
High visibility strategies: flashing crosswalks, better signage, larger signage, brighter traffic lights	SHORT	MEDIUM	City of Talladega, ALDOT	Consult toolkit, Identify high impact locations from the HIN

Evaluate and improve Access Management policies in the HIN to reduce conflicts on busy corridors	MEDIUM	MEDIUM	City of Talladega	Consult toolkit, Identify high impact locations from the HIN
Leading intervals for bikes and pedestrians, giving them time to begin crossing before traffic lights turn.	MEDIUM	MEDIUM	City of Talladega	Consult toolkit, Identify high impact locations from the HIN

COUNTER MEASURES TOOLKIT

OPERATIONAL SAFETY

- Leading Pedestrian Interval (LPI)
- Pedestrian Phasing and Cycle Lengths
- Coordinated Signal Timing
- Transportation Systems Management & Operations (TSM&O)
- No Right Turn on Red (RTOR) Signs
- Rectangular Rapid Flashing Beacon (RRFB) **A**
- Variable Speed Limit (VSL) Signs
- Update signage and warnings on Right-turn slip lanes

QUICK-BUILD SOLUTIONS

- Curb Extensions **A**
- Truck Aprons
- Signalized Pedestrian Crossings
- Protected Left Turning Movements
- Pedestrian Refuge Islands **B**
- Raised Crosswalks **C**
- Speed Humps
- Lighting
- Painted crosswalks and high risk intersections **D**

SAFE COMMUNITY

Safety measures do not only include changes to the physical environment. The city needs to create initiatives that help educate the community and create a culture of safety that will encourage all people to improve their behaviors.

ACTION ITEMS	TIMELINE	PRIORITY	PARTNERS	IMPLEMENTATION
Strategy 1: Develop public programs on traffic safety				
Create a city-wide Vision Zero initiative to publicize the plan and action goals.	IMMEDIATE	HIGH	City of Talladega, Marketing	Utilize internal resources, or partner with a local consultant to develop and promote the campaign
Implement neighborhood level traffic safety programs.	SHORT	MEDIUM		Use new Vision Zero material to share at neighborhood level meetings
Partner with High Schools to educate students on the goals and projects of the Action Plan	SHORT	HIGH	Public Schools, Vision Zero Task Force	Host a program to inform students and provide opportunities to participate in community events
Support Safe Routes to School Program to encourage safer roads for children	IMMEDIATE	HIGH	Vision Zero Task Force	Research involvement
Consider promoting Vision Zero for Youth as a partner program that integrates with SRTS.	IMMEDIATE	HIGH	Vision Zero Task Force	Research involvement

Strategy 2: Create a Vision Zero task force to champion efforts				
Send an open invitation to the community for volunteers to serve on a task force.	IMMEDIATE	HIGH	City of Talladega	Create an engagement plan to form committee
Schedule regular meetings to stay informed of progress and communicate to community	MEDIUM	MEDIUM	Vision Zero Task Force, City of Talladega	Develop a calendar of regular meetings
Strategy 3: Assign city staff to monitor implementation				
Appoint a representative from the city to lead public efforts.	IMMEDIATE	HIGH	City of Talladega	Determine the best internal fit
Strategy 4: Coordinate Regional Efforts with ALDOT				
Collaborate on all traffic related projects to consider them through the lens of Vision Zero.	SHORT	MEDIUM	City of Talladega, ALDOT	Communicate with County and State level officials
Evaluate how Vision Zero could impact Talladega County	MEDIUM	LOW	City of Talladega, ALDOT	Communicate with County and State level officials

VISION ZERO FOR YOUTH

Born out of the National Center for Safe Routes to School, the Vision Zero for Youth initiative encourages communities and elected officials to focus safety improvements and efforts to slow traffic speeds where children and youth travel. Starting with youth can be the spark that creates community support for a broader Vision Zero program to eliminate all traffic fatalities.

PRIORITIZE WELL-BEING

Areas of persistent poverty tend to have higher levels of crashes and the data identifies where prioritizing investment in these areas could create safer conditions and decrease the level of risk for alternative forms of transportation. The action list below details how the City can improve the safety network for vulnerable users.

ACTION ITEMS	TIMELINE	PRIORITY	PARTNERS	IMPLEMENTATION
Strategy 1: Prioritize areas outside the HIN that have specific needs.				
Consult vulnerability analysis to focus on areas that are disadvantaged	SHORT	HIGH	City of Talladega	Prioritize disadvantaged areas when planning and funding projects
Strategy 2: Continue partnering with local institutions to address safety needs on campuses.				
Work with leaders and students to identify areas that need improvements.	IMMEDIATE	MEDIUM	City of Talladega, Talladega College, AIDB	Conduct workshops on campus and quick build projects that the community can participate in.
Create campus connectivity plans.	SHORT	HIGH	Talladega College, AIDB	Sidewalk and bike plans and connectivity to the city network
Strategy 3: Assess the need for Neighborhood level planning				
Incorporate neighborhood level safety planning, and strategies.	MEDIUM	LOW	City of Talladega, Neighborhoods	Use the countermeasures toolkit to identify traffic calming projects for neighborhoods
Strategy 4: Dedicate funding to all modes of transportation				
When updating or building new roads include bike and pedestrian infrastructure	SHORT	HIGH	City of Talladega	Prioritize alternative forms of transportation and consult connectivity plan

SAFE ROUTES TO SCHOOL PROGRAM

The above institutions are not the only local educational facilities impacted by the HIN. Many of the city's K-12 public schools are within close proximity to the HIN. Safe Routes to School is a program that promotes safe, convenient, and enjoyable walking and biking for children traveling to and from school. It aims to improve student safety, increase physical activity, and encourage active transportation. The program involves community members, school staff, and transportation professionals in creating safer routes and shifting travel norms. A key focus is ensuring that underserved communities, often lacking safe infrastructure, receive priority investment to support walking, biking, and rolling to school. This program would be a natural addition to Vision Zero.

Children walking and biking to school

FOCUS AREAS

Talladega has several institutions that make up a large population of the city. Talladega College is the oldest HCBU in the state, and the city is home to the Alabama Institute for the Deaf and Blind, which is also one of the largest employers in the city.

These two pillars of the community present unique challenges and provide a unique opportunity to address vital needs to create a safe network for all users.

TALLADEGA COLLEGE

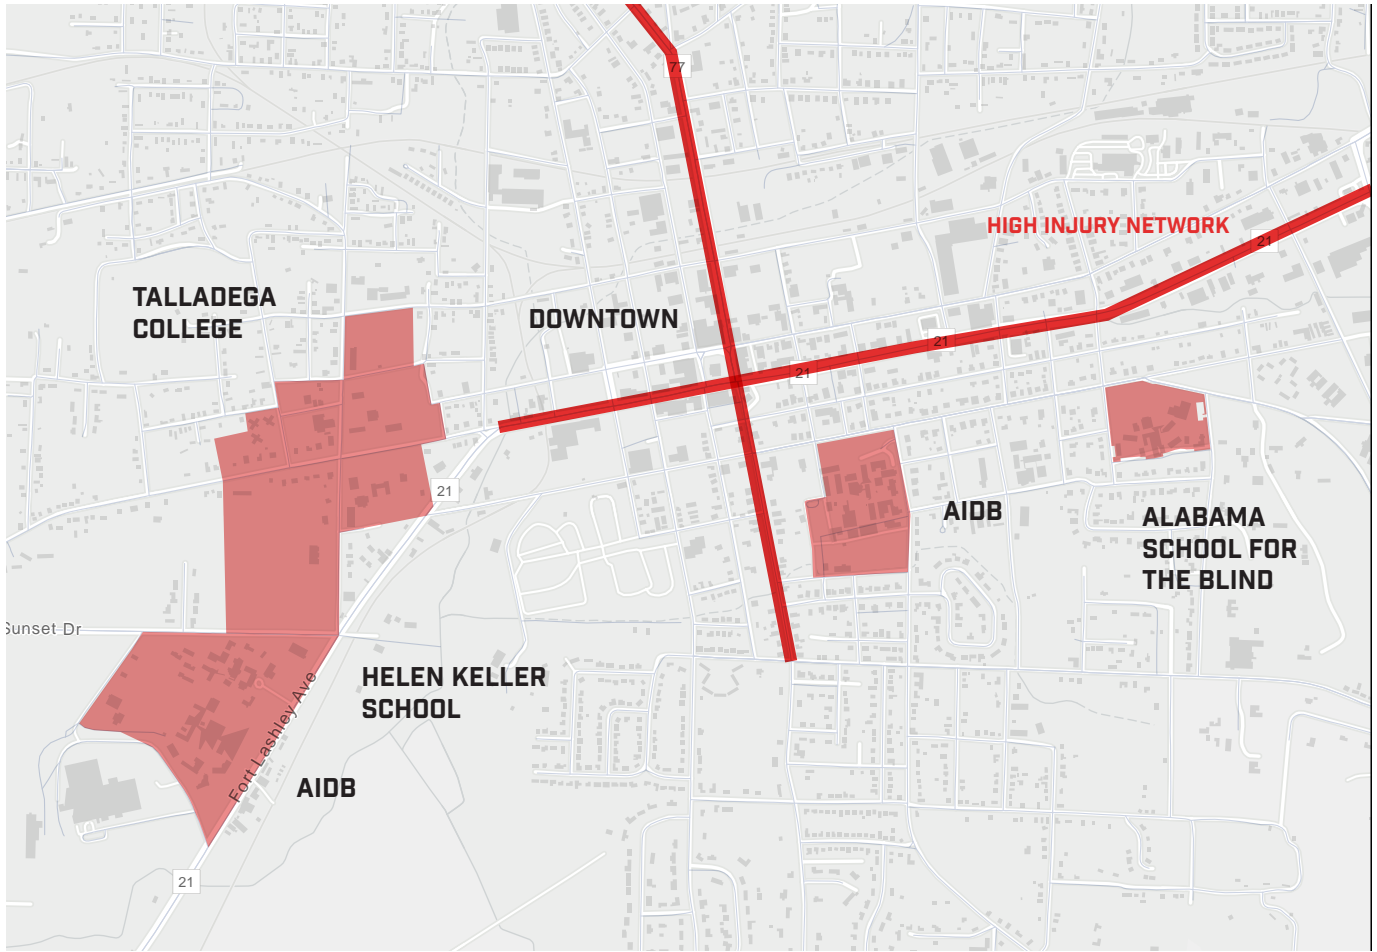

Colleges are home to transient populations of students that often have limited transportation options. Many students that live on campus must use public transportation, bikes, or walking to get around the city maximizing the impact of creating safe streets for pedestrians. Prioritizing the safety of students while temporarily calling Talladega home should be a top priority for the city.

ALABAMA INSTITUTE FOR DEAF AND BLIND (AIDB)

AIDB has a large presence in the city. There are several campus locations and workforce training centers associated with the institute. Meeting with faculty and students was a priority for the community engagement section of the plan. The students at AIDB view the city and the transportation network from a unique perspective. They provided invaluable insight on the daily challenges and threats they encounter when moving around the city.

PRESBYTERIAN HOME & HOPE ACADEMY

Located adjacent to the HIN corridor of Battle St, the Presbyterian Home and Hope Academy is another state institution with its presence in Talladega.

Talladega College Campus

Alabama Institute for Deaf and Blind Campus

DATA QUALITY

One of the fundamentals of Vision Zero is that it is data driven. Improving the quality of data will provide the city with the information it needs to further prevent serious injuries and fatalities. By identifying the locations of incidents and who was impacted the city will have a better understanding of what actions need to be taken.

ACTION ITEMS	TIMELINE	PRIORITY	PARTNERS	IMPLEMENTATION
Strategy 1: Improve data reporting				
Dedicate space on the city website to communicate project priorities and inform residents of progress.	IMMEDIATE	HIGH	City of Talladega	Make Vision Zero data public
Begin keeping a detailed database of traffic crash data to share with the public	SHORT	HIGH	City of Talladega	Coordinate with local law enforcement to ensure reporting standards are accurately captured.
Provide opportunities for citizens to report traffic related incidents.	MEDIUM	LOW	City of Talladega	Create digital and physical reporting tools for citizens
Publish a yearly update on Vision Zero goals, implementation, and project tracking.	SHORT	HIGH	City of Talladega	Host an annual meeting or report that outlines progress.
Strategy 2: Improve data collection and quality				
Evaluate crash reporting metrics with local authorities	IMMEDIATE	HIGH	City of Talladega Police Department	Establish a set of criteria to address Vision Zero goals
Coordinate with local and regional transportation groups	SHORT	MEDIUM	City of Talladega, ALDOT, EARPDC	Set up a meeting to discuss plan overviews and responsibilities
Consider forming a crash review committee to better understand causes of incidents	MEDIUM	LOW	City of Talladega	Document and catalogue factors involved that could inform system updates

TIMELINE & PRIORITY CRITERIA

Timeline

The length of time it would take to address and implement the recommendation.

- Immediate: 0-1 year
- Short: 1-2 years
- Medium: 2-5 years
- Long: 5+ years

Priority

How quickly should the city address this item? This category ranking was determined by using a rubric that considered what projects would be the most impactful in relation to the timeline. High impact projects that would be quick to implement were given a higher priority. Low impact projects that would take a long time to implement were ranked lower in priority.

6

MONITORING PROGRESS

STATUS OF VISION ZERO

This Action Plan and the goals in previous section represent a commitment by the City to improve serious injuries and fatalities in the future. In order to meet the Vision Zero goal, there also has to be a commitment from the city to track the progress of the Action Plan. This requires continuous effort and collaboration among the key stakeholders in the plan. There are several areas the City can use to track the status of the Vision Zero Action Plan. Those areas include:

ACCOUNTABILITY

With the number of stakeholders involved in the Action Plan, there is a need for regular accountability and updates throughout the process. There are also many moving parts to the Vision Zero plan and requires ownership between groups that taking ownership of and are impacted by the initiatives. The City should provide regular updates to the public and publish an annual report that identifies progress and current activity.

TRANSPARENCY

The Action Plan should be made public and should be accessible to the citizens of Talladega. The general public should have the ability to see updated data related to the Vision Zero action items.

Every stakeholder involved should have their involvement and responsibility communicated. They should be regularly engaged and updated on the progress of the plan, and be able to contribute comments and feedback on current activities. This level of transparency should accommodate shifts in priorities and ongoing evaluation of projects.

The City should be able to show Vision Zero funds are being used.

TRACKING SUCCESS

Because Vision Zero plans are data driven the City will use a set of identified metrics to track the progress of the Action Plan. The following section details how tracking will be achieved.

MONITORING PROGRESS

Defining a list of metrics the City can use to track progress is instrumental in monitoring the ongoing actions being implemented across the city. This list will also help in determining the effectiveness when countermeasures are introduced across the city, and what - if any - changes need to be made. The following list is the beginning of measures that should be tracked:

EVALUATION METRICS

The following are metrics that can be tracked during the implementation phase:

- Number of serious and fatal crashes
- Number of intersection redesign projects
- Number of improved signal timing projects
- Number of miles of sidewalk installed
- Number of new crosswalks
- Number of ADA improvements added to the sidewalk network
- Number of miles of new bike lanes
- Number of completed recommendations within High Injury Network
- Number of residents reached through Vision Zero outreach and education campaigns
- Number of community-led Vision Zero projects

After implementing projects, the City will assess the following metrics on the project corridors to determine which actions are working well and which ones may need adjustment or additional support:

Quantitative

- Reduction and elimination of HIN crashes
- Speeding differential between operating speeds and posted speed limit

Qualitative

- Are safety improvements being made where need and impact are greatest and focused on eliminating fatal and serious injury crashes?
- Has implementation effectively reduced the identified crash types?
- Are deployed safety countermeasures improving safety as expected?

The purpose of assessing safety metrics is to identify which safety countermeasures are working and how well they are working so that similar safety countermeasures can be implemented elsewhere, or so that safety countermeasures could be modified to further improve safety.

**VISION
ZERO**
TALLADEGA

The Vision Zero Action Plan is the first step for the City of Talladega making a commitment to providing safe, equitable mobility for its residents.
